OWNER OR OPERATOR AND ADDRESS

DESCRIPTION OF DEPOSIT

The deposit is a small, irregular, mineralized zone in micaceous schist. The minerals lie in a faulted zone parallel to the schistosity and striking north 30 degrees west and dipping 65-75 degrees northeast.

The mineralized zone consists of quartz stringers and silicified schist containing considerable pyrite and a little galena, zinc blende, and chalcopyrite.

Associated minerals or products of value - Zinc.
