DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

The country rocks are volcanics of the Hazelton group. On the Iron claims the showing is a pyritized zone many feet wide. Assays from this showing gave only a trace of gold and silver. On the Beaver Extension claims the volcanic rocks are mineralized with pyrite and quartz. The quartz of one exposure contains a hydrocarbon, probably anthraxolite.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

These claim groups are located between elevations of about 2,300 and 2,700 feet on the east side of the Illiance River, 9 miles east-northeast of the community of Alice Arm. The Iron group is located about 1 mile northeast of the Golden Crest property and $\frac{1}{2}$ mile west of the divide to the Shishilabet Lakes. The Beaver Extension claims are located between the above two groups on a small creek, known locally as Iron Creek, which flows into the Illiance River from the divide to the west of the Shishilabet Lakes.

The Iron group of 6 claims and the Beaver Extension group of 6 claims were owned by John Hauber, of Alice Arm, in 1930. A small amount of open cutting was reported.
