DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

Small amounts of scheelite are found in a bed of lime-silicate rock 2 to 6 feet thick and in lenses of the same type of rock from 1½ to 2 feet thick and 3 feet long. A large body of granite outcrops 150 feet from the lime-silicate rock and associated metamorphosed sediments. Two grab samples, one from a well-mineralized part of a lens, assayed: Tungstic oxide (WO<sub>3</sub>), 0.04 to 0.27%.

HISTORY OF EXPLORATION AND DEVELOPMENT  
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

This occurrence is located at about the 400 foot elevation on the west side of the Bear River, about 4½ miles north of Stewart.

Two claims, the Louise and the Dot, were staked in August 1942 by Arthur Cameron of Stewart. The workings consist of several open cuts some 300 feet above the floor of the valley.

Stevenson, John S.; Tungsten Deposits of British Columbia; Bulletin No. 10 (Revised), p. 53, British Columbia Department of Mines, 1943.
