DESCRIPTION OF DEPOSIT/DESCRIPTION DU GISEMENT

A complex of highly carbonatized andesitic flows and irregularly intruded masses of altered dacite comprise the rocks of the locality. The showings consist of a remarkable belt of quartz veins and lenses outcropping to a height of 150 feet and across a width of about 700 feet along both walls of the precipitous canyon at the mouth of Quartz creek. The zone strikes about north 73 degrees east and dips about 60 degrees south. The main quartz-structures are conformable to the attitude of the zone except on the lower or hanging-wall side near the confluence of Quartz and Trout creeks. Here a possible major fault striking north-west has caused pronounced distortion and reverse dips of the veins.

Much of the quartz is white, but iron-stained areas, small cavities, honeycombed quartz, and crevices are frequently seen. Sulphides are extremely scarce and occur only as occasional grains of pyrite and patches of tetrahedrite.

A selected sample from an isolated and rare patch showing blebs of grey copper in quartz towards the central section of the zone assayed: Gold, 0.20 oz per ton; silver, 80 oz per ton.

Associated minerals or products - Silver.

HISTORY OF EXPLORATION AND DEVELOPMENT
HISTORIQUE DE L'EXPLORATION ET DE LA MISE EN VALEUR

The property is located at the mouth of Quartzrock Creek, 5 miles east of Cassiar.

The Red Rock group of 7 claims was owned in 1935 by N.L. Callison and associates, of Fort Nelson. Work to that date had been done in open cuts and a short adit.

Cassiar Yukon Gold Mines Ltd., incorporated in 1950, acquired 3 claims, the Partner, Canyon No. 1, and Canyon No. 2, covering these showings. No work was reported by the company.

The showings were held in 1980 as the Wing Gold 1 and 2 claims. Plaza Mining Corporation optioned the property, apparently from J.R. Hope of Edmonton in July 1980. In October of that year the company optioned two placer leases overlying the Wing Gold claims from Ann Stewart of Cassiar.
