PROSPECTORS ASSISTANCE PROGRAM
PROSPECTING REPORT FORM (continued)

B. TECHNICAL REPORT

- One technical report to be completed for each project area.
- **Refer to Program Requirements/Regulations, section 15, 16 and 17.**
- If work was performed on claims a copy of the applicable assessment report may be submitted in lieu of the supporting data (*see* section 16) required with this TECHNICAL REPORT.

Name Fred Nilsen Reference Number 96-97-P83

LOCATION/COMMODITIES

Project Area (as listed in Part A) Area number four. MINFILE No. if applicable

Location of Project Area NTS New logged off areas Lat Various Long Various.

Description of Location and Access Prospecting on freshly logged areas in many directions from Prince George,B.C. such as the Bowron rd.-Stonebuck rd.-Gregg Creek rd.=Buckhorn rd. Clear Lake rd.-Docs Creek rd.-George Creek rd.-Blackwater rd.-etc.

Main Commodities Searched For Gold,silver,lead,zinc,copper,nickel,molybdenite or any other mineral of value.

Known Mineral Occurrences in Project Area none

WORK PERFORMED

1. Conventional Prospecting (area) Mainly float Prospecting,and sampling rock outcrops
2. Geological Mapping (hectares/scale) none
3. Geochemical (type and no. of samples) Seven soil samples and six rock chip samples.
4. Geophysical (type and line km) None
5. Physical Work (type and amount) Float prospecting and checking outcrops,soil samples.
6. Drilling (no,. holes, size, depth in m, total m) None.
7. Other (specify) Panning any creek that flowed through these new clear cuts.

SIGNIFICANT RESULTS

Commodities Discoverd a small showing of talc. Claim Name None.

Location (show on map) Lat 4-79 920E UTM Long 59-50 505N UTM Elevation 3137 feet.

Best assay/sample type Best sample turned out to be the talc sample,but the well exposed outcrop was quite small and the talc had too many inclusions of other minerals.

Description of mineralization, host rocks, anomalies Other than the talc none of the other areas were very succesfull. The talc turned out to be a small lense in Greenstone. None of the other samples taken had any significant mineralization.No Other mineral occurances were found.

Supporting data must be submitted with this TECHNICAL REPORT

Name Fred Nilsen. Reference Number 96-97 P83.

LOCATION/COMMODITIES

Project Area (as listed in Part A) Tatuk Lake East #1 MINFILE No. if applicable _____

Location of Project Area NTS 93F and 93G. See map attached Lat _____ Long _____

Description of Location and Access The area can be reached by way of the Bobtail forest service road that leaves highway 16 west from Prince George one half kilometer past Bednesti Lake service station to the left. the 800 and 400 roads branch off from this road to the right.

Main Commodities Searched For Gold, silver, copper, lead, zinc and molybdenite.

Known Mineral Occurrences in Project Area 0

WORK PERFORMED

1. Conventional Prospecting (area) Soil sampling, float prospecting, outcrop sampling.
2. Geological Mapping (hectares/scale) 0
3. Geochemical (type and no. of samples) 10 soil samples and 34 rock chip samples for assay.
4. Geophysical (type and line km) 0
5. Physical Work (type and amount) Sampling float, outcrops, soil sampling, traversing area.
6. Drilling (no,. holes, size, depth in m, total m) 0
7. Other (specify) Try panning ant hills in areas of interesting float, no success.

SIGNIFICANT RESULTS

Commodities Several samples with molybdenite. Claim Name none.

Location (show on map) Lat 53 40 N. Long 123 50 Elevation 3600 ft.

Best assay/sample type Molybdenite in granite pegmatite.

Description of mineralization, host rocks, anomalies Molybdenite in pegmatite lenses at outer boundary of granite intrusion.

Best samples are numbers 29-G-96 to 32-G-96 as shown on attached map of number 1 area, these are all from the same area taken from outcrop over a distance of 100 meters, from small pegmatitic seams.

Supporting data must be submitted with this TECHNICAL REPORT

ıy 4, 1990

trees are over 300 years old. The expectation was that because these trees were firmly rooted, they would not blow down, yet provide enough seed for regeneration.

If you take a look around, you may notice that the area is fairly well stocked but not with Douglas Fir. Lodgepole Pine, Spruce, Subalpine Fir, Aspen and some Douglas Fir now stock the area. Were the seed trees effective?

Other areas also showed the trend that "veteran" seed trees produce little regeneration, yet younger (i.e. 120 yr.) seed trees are prone to windthrow. Recent public opinion has created a

10
57.5 km

Blowdown Viewpoint

This area was one of the hardest hit areas of the Ma windstorm. In total, the opening that you see (including p logged areas) is 336 ha. 103 ha of this was the direct the 1990 blowdown event. Salvage logging operatio immediately and have now been completed. Refo

ICP - .500 GRAM SAMPLE IS DIGESTED WITH 3ML 3-1-2 HCL-HNO3-H2O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
THIS LEACH IS PARTIAL FOR MN FE SR CA P LA CR MG BA TI B W AND LIMITED FOR NA K AND AL.
ASSAY RECOMMENDED FOR ROCK AND CORE SAMPLES IF CU PB ZN AS > 1%, AG > 30 PPM & AU > 1000 PPB
- SAMPLE TYPE: ROCK AU* - IGNITED, AQUA-REGIA/MIBK EXTRACT, GF/AA FINISHED.(10 GM)
Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.
