PROSPECTORS ASSISTANCE PROGRAM

MINISTRY OF ENERGY AND MINES

GEOLOGICAL SURVEY BRANCH

PROGRAM YEAR:	1997/1998
REPORT #:	PAP 97-12
NAME:	DENIS DELISLE

Summary 1997 Prospecting year

ONYX - PHIL - CROWFOOT- LAMBERTON (MAPS 1,2,3,4,5,6 & 7) - : The mag over the Bet showing shows a small response but a trend that follows the mineralization. There was no indication of any magnetic on the Phil Onyx showings even with in the area of galena rich float found this year. The float was found between Onyx ck and the road above it just below the north west corner of the phil claim a dispersal train would indicate a vein structure coming out of the hill there. The new road did not show any large showing #1 just a crumbly quartz vein with very small amounts of galena possibly part of the same system feeding the float and or from the Phil showings to the east. Further to the east the west flank of Crowfoot had some very anomalous mag readings seemingly in strike with the Bet showings , these will be followed up. The mag readings also seem to go on strike with the Phil showings and some very anomalous mag readings in the Lamberton road . In this area (found accidently by trying to find a better access to the back of Crowfoot to do Mag work and having some time left at the end of the day took a few readings) readings are very anomalous further work is needed in the summer here. As the large deposit eluded explornationists before me it becomes increasingly more difficult for me to find.

SNUFFBOX (MAP 8) - Near the contact with the Mt Fowler gniess and the Eagle Bay sediments there are some potential areas specifically to the west of snuffbox near the foot of Little Lichen Mt. in a limestone / greenstone and basalt dyke a #1 anomalous result.
Further up to where the snow and ice made it precarious to continue were some anomalous moss matt samples. Though the Mike and Red claims are close the producers of these anomalies maybe not covered or known by these claim owners. The other anomalous moss matt up Snuffbox creek may be from the Red claim.

not in proposal SPILLMAN (MAP 9)- I followed this up by a rumor that there is a showing up one of these valleys not previously known between the lake and the Lucky Coon showings. There were no positive results but again the treacherous ice and snow did not allow further prospecting up the valleys.

#3 SPAPILEM (MAP 10)- Shows promise surprisingly just gold in moss matts this I suppose could be placer source but also a very possibility of a gold skarn as usual further investigation is needed.) up to 675 ppb Au 4 anomalous samples

SKAAM or SQUAM BAY (MAP 11 A,B,D,E,F, & 12) - Trying to find the anomaly factors of the glacial till geochemistry results from the work of P.T Bobrowsky (1997-9) The quartz stockwork found on the south slope directly upslope #3 from the Pb,Zn and Cu anomaly sample may be part of the feeder system for that anomaly. This has a lot of potential though it has been scoured by the best the steepest toughest ground would indicate could of not been looked at hard enough and that is where the source could be.

anomalous Cu Zn Ag Pb in rocks

#4 POWDER LAKE (MAP13)- Has a lot of pyrite with wisps of chalcopyrite filling some of the basalt and is geologically interesting . But no big numbers or similar deposits to compare it too. The felsic breccia is barren and interesting but nothing there more research work and prospecting.

not in proposal HYDRO - RAFT (MAP 14, 15) - I couldn't find the moly I'm sure its there again the snow wouldn't allow me in the higher elevations. I was hoping to find a connection between the old CK property and the Hydro. Needs more looking into that whole area as many new logging roads have been pushed into the area and it has a similar setting (ie meta sediments and gneisses meta-granites with a additional advantage of having young volcanics near by.

#2 (Lucky) FORREST- ANNISE -HILLTOP (MAP17,18) - A combination of poor timing and bad weather and a real busy year restricted my work projects here. The rock is good the mineralization outstanding but its in BC I can't seem to interest anyone yet but that will change. I plan to do more work in this area extend the boundaries find new showings. SOILS: 364 Zn, 886 Cu Anomalous Cu/Zn in soils. Forest 1+2 claims nearby.

(LOCATION MAPS 19 & 20)

The weather was bad the summer late I got busier than a one arm paper hanger with a itch with work and supporting the LRMP so things didn't turn out they way I planned . Thank God for a late warm fall or I would of had to send the assistance money back. Next time it will be set up better. I did not even come close to making it on to Hoskins Creek a lot of it was the weather but not all, next time .

not done

Map 16 Andy-Horne (North Kaft River)
- not in proposals.

PROSPECTORS ASSISTANCE PROGRAM
PROSPECTING REPORT FORM (continued)

B. TECHNICAL REPORT

* One technical report to be completed for each project area
* Refer to Program Requirements/Regulations, section 15, 16 and 17
* If work was performed on claims a copy of the applicable assessment report may be submitted in lieu of the supporting data (see section 16) required with this TECHNICAL REPORT

Name DENIS DELISLE Reference Number 97/98 #29

LOCATION/COMMODITIES

Project Area (as listed in Part A.) SKWAAM Minfile No. if applicable 82M 120

Location of Project Area NTS _____ Lat 51°05' Long 119°46'

Description of Location and Access GO PAST ADAMS LK SAWMILL for 13Km turn Up the 5400 ROAD for 7Km. or ANYWHERE SOUTH to 18Km on the Adams LK ROAD.

Main Commodities Searched For Cu, Pb, Zn - Au, Ag

Known Mineral Occurrences in Project area SARATOGA - to the NW Ag, Cu, Pb, Zn. Glacial till survey shows Zn, Pb, Cu Ba anomalies.

WORK PERFORMED

1. Conventional Prospecting (area) 10Km x 5Km
2. Geological Mapping (hectares/scale) SAME
3. Geochemical (type and no. of samples) 4 MOSS MATS
4. Geophysical (type and line km) 9 Km Magnetometer
5. Physical Work (type and amount) —
6. Drilling (no. holes, size, depth in m, total m) —
7. Other (specify) —

SIGNIFICANT RESULTS (if any)

Commodities MALACHITE. Claim Name

Location (show on map) Lat _____ Long _____ Elevation

Best assay/sample type

Description of mineralization, host rocks, associations

malachite float - in Quarry

Supporting data must be submitted with this TECHNICAL REPORT.

PROSPECTING REPORT FORM (continued)

B. TECHNICAL REPORT

* One technical report to be completed for each project area
* Refer to Program Requirements/Regulations, section 15, 16 and 17
* If work was performed on claims a copy of the applicable assessment report may be submitted in lieu of the supporting data (see section 16) required with this TECHNICAL REPORT

Name DENIS DELISLE Reference Number 97/98 P29

LOCATION/COMMODITIES

Project Area (as listed in Part A.) FORREST GOLDEN Minfile No. if applicable 82M 114

Location of Project Area NTS _____ Lat 51°29' Long 119°32'

Description of Location and Access DRIVE NORTH ADAMS LK MILL FOR 74Kms TAKE THE GOLDEN CK Rd FOR 13Km AND TAKE OVER GROWN ROAD 3 to 4 Km up into ROCK FACE.

Main Commodities Searched For Cu, Zn, Pb.

Known Mineral Occurrences in Project Area Cu, Zn, Pb.

WORK PERFORMED

1. Conventional Prospecting (area) 1000m x 2000 meters
2. Geological Mapping (hectares/scale) Some.
3. Geochemical (type and no. of samples) 36 soil Samples.
4. Geophysical (type and line km) Magnetometer - 3Km.
5. Physical Work (type and amount) -0
6. Drilling (no. holes, size, depth in m, total m) -0
7. Other (specify) _____

SIGNIFICANT RESULTS (if any)

Commodities New ANOMOLOUS - Cu Zn Claim Name FOREST

Location (show on map) Lat _____ Long 51°29' Elevation 3800'

Best assay/sample type - Soil Sample - 886 Cu., 3642n and 307 Cr.

Description of mineralization, host rocks, a[illegible]es GREENSTONE, WITH QUARTZ veinyng AND MINERALIZATION IS Pyrite, Magnatite. Some Limestone and Dolomite intruded by younger ortho-gneiss and meta-granites south and west.

Supporting data must be submitted with this TECHNICAL REPORT.

LOCATION/COMMODITIES

Project Area (as listed in Part A.) SPAPILEM CK Minfile No. if applicable —

Location of Project Area NTS _____ Lat 51°14'30" Long 119°38'

Description of Location and Access DRIVE 90 Km NORTH of ADAMS LK MILL SPAPILEM CK IS THERE.

Main Commodities Searched For — Au, Cu, Pb, Zn.

Known Mineral Occurrences in Project Area Au? ANOMALLY by — GLACIAL TILL SURVEY TO THE NORTH.

WORK PERFORMED

1. Conventional Prospecting (area) 15 km X 7km.
2. Geological Mapping (hectares/scale) Same.
3. Geochemical (type and no. of samples) 21 moss matts / 5 Rock chips
4. Geophysical (type and line km) —
5. Physical Work (type and amount) —
6. Drilling (no. holes, size, depth in m, total m) —
7. Other (specify) —

SIGNIFICANT RESULTS (if any)

Commodities Au Claim Name —

Location (show on map) Lat 51°14'30 Long 119°38 Elevation 3000'

Best assay/sample type 640 ppb — Au

Description of mineralization, host rocks, anomalies HOST ROCK IS UNKNOWN Possibly a SKARN — in a Phyllite Greenstone or biotite gneiss — granite.

Supporting data must be submitted with this TECHNICAL REPORT.
