

# British Columbia bedrock geology

The British Columbia Geological Survey maintains and delivers province-wide digital coverage of bedrock geology.

- digital data are sourced from field-based mapping programs
- coverage includes observations that may have been too detailed to present in original published maps
- as Survey geologists continue field mapping, their new data are integrated

In contrast to traditional paper or electronic (pdf) compilations, the digital coverage of British Columbia is neither static nor at a single scale.

Access and interact with digital data using MapPlace 2, the Survey's geospatial web service, or download in shapefile format.

For the latest digital data visit  
[www.empr.gov.bc.ca/Mining/Geoscience/BedrockMapping/Pages/BCGeoMap.aspx](http://www.empr.gov.bc.ca/Mining/Geoscience/BedrockMapping/Pages/BCGeoMap.aspx)

Download print-ready bedrock  
compilations at scales of  
1:1,500,000 and 1:2,000,000.
