

# The Golden Triangle of northwestern British Columbia

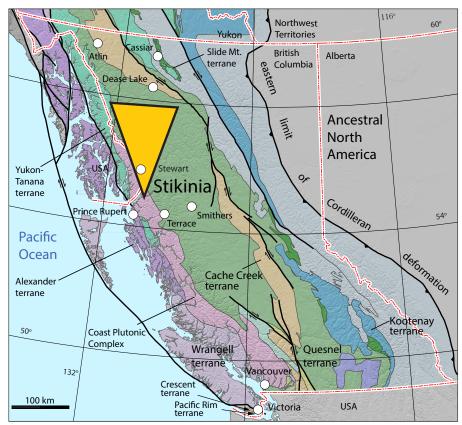

### Stikinia (Stikine terrane), home to the Golden Triangle

Stikinia is a long-lived oceanic arc terrane that extends for about 1000 km along the length of the Canadian Cordillera. Mineral deposits developed during

- accretion of terranes to the western margin of ancestral North America
- post-accretion deformation and magmatism

The Golden Triangle is the popular name for a loosely defined region that includes most of the major gold, silver, and copper deposits in west-central Stikinia.

Most deposits in the Golden Triangle are related to the Hazelton Group and affiliated intrusions.

### Past and current operating mines

More than 150 mines have operated since prospectors first arrived at end of the 19th century. Past-producing mines include Granduc, Eskay Creek, Anyox, Kitsault, Premier/Dilworth, Dolly Varden, and Snip. Exploration continues at Eskay Creek, Premier/Dilworth, Dolly Varden (Kitsault Valley), Snip, and Scottie Gold mine.
